## DETAILED ACTION

### *Double Patenting*

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

2. Claims 1-22 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-16 of U.S. Patent No. 6,706,904. Although the conflicting claims are not identical, they are not patentably distinct from each other because the examined claims are either anticipated by, or would be obvious over, the patented claims. Here, claims 1-16 are directed to a dimetalhydroxy malate composition and a method of using said composition. In particular, claims 14-16 teach the use the composition in formulations that includes a beverage or food as well as the addition of a second mineral salt or mineral amino acid chelate to the composition. The difference between the patented claims and the instant claims is the addition of the food matrix fortified with the dimetalhydroxy malate. However, in order to practice the process of patented claims 14-16, the composition of patented claim 1 is formulated into a beverage or food and therefore forms a fortified food matrix as in the instant claim 1. Thus, it would be obvious to one skilled in the art to add a fortified food matrix, as recited in

Art Unit: 1621

patented claims 14-16, to the patented composition in order to form a mineral fortified food matrix in order to be administer to a warm-blood animal.
